Fur, Feathers, and Ferns 2

GIANT SEA BASS

Scientific name:

Status:

Habitat:

Temperature range:

Maximum weight:

Lifespan:

Threats:

Conservation efforts:

The giant sea bass is one of the local residents off the coast of Southern California. Do some research at Blue Cavern and see if you can figure out why this animal lives only in our part of the world. Be resourceful!

Fur, Feathers, and Ferns 3

Visit the live coral exhibit in the Tropical gallery. Human activities have made coral one of the most at-risk animals in the world. Take a moment to imagine if all the reefs were to become extinct. In the box below, write a message to yourself in the future. Include in the message how you feel about animals becoming extinct. Make sure you hide the note someplace safe where you can find it a year from now. Use the back of this page if you need more space.

Dear Future Me,
